CLAIMS

What is claimed is:

- 1. Amide metathesis and transamidation reactions comprising reacting in a solvent at least two reactants, the reactants comprising at least two distinct amides, or at least one amide and at least one amine, in the presence of a metal-containing catalyst, at a temperature of about 250°C or less, wherein a reaction takes place and the reaction is selected from the group consisting of transamidation and amide metathesis reactions.
- 2. The reaction of claim 1, wherein the reactants are reacted at a temperature of about 150°C or less.
- 3. The reaction of claim 1, wherein the reactants are reacted at a temperature of from about 90°C to about 150°C.
- 4. The reaction of claim 1, wherein the reactants are reacted at a temperature of from about 90°C to about 250°C.
- 5. The reaction of claim 1, wherein the metal-containing catalyst is selected from the group consisting of amido-ligated transition or main group metals, transition metals bearing anionic ligands, main group metals bearing anionic ligands, Lewis acidic metal complexes, and combinations thereof.
- 6. The reaction of claim 1, wherein the reactants are reacted in an aromatic, non-polar, aprotic solvent.

- 7. The reaction of claim 1, wherein the reactants are reacted in a solvent selected from the group consisting of benzene and mono-, di-, and tri-alkyl-substituted benzenes.
- 8. The reaction of claim 1, wherein the reactants are reacted in toluene.
- 9. The reaction of claim 1, wherein the metal-containing catalyst is selected from the group consisting of: Sc(OTf)₃, Ti(NMe₂)₄ and Al₂(NMe₂)₆.
- 10. A method of synthesizing oligo- or polyamides comprising reacting amine-amide reactant combinations in a solvent, in the presence of an aluminum-, lanthanum-, scandium-, tantalum-, tin-, titanium-, ytterbium- yttrium-, or zirconium-containing catalyst, at a temperature of from about 90°C to about 250°C, wherein a transamidation reaction takes place.
- 11. An amide metathesis reaction comprising reacting in a solvent two distinct amidecontaining molecules, in the presence of a metal-containing catalyst, at a temperature of about 250°C or less, wherein an amide metathesis reaction takes place.
- 12. The reaction of claim 11, wherein the amide-containing molecules are reacted in an aromatic, non-polar, aprotic solvent.
- 13. The reaction of claim 11, wherein the metal-containing catalyst is selected from the group consisting of: Sc(OTf)₃, Ti(NMe₂)₄ and Al₂(NMe₂)₆.

- 14. The reaction of claim 11, wherein the metal-containing catalyst is selected from the group consisting of aluminum-, lanthanum-, scandium-, tantalum-, tin-, titanium-, ytterbium- yttrium-, and zirconium-containing catalysts, and the amide-containing molecules are reacted at a temperature of from about 90°C to about 250°C.
- 15. A transamidation reaction comprising reacting in a solvent at least one amide with at least one amine, in the presence of a metal-containing catalyst, at a temperature of about 250°C or less, wherein a transamidation reaction takes place.
- 16. The reaction of claim 15, wherein the amide and the amine are reacted in an aromatic, non-polar, aprotic solvent.
- 17. The reaction of claim 15, wherein the metal-containing catalyst is selected from the group consisting of: Sc(OTf)₃, Ti(NMe₂)₄ and Al₂(NMe₂)₆.
- 18. The reaction of claim 15, wherein the metal-containing catalyst is selected from the group consisting of aluminum-, lanthanum-, scandium-, tantalum-, tin-, titanium-, ytterbium- yttrium-, and zirconium-containing catalysts, and the amide-containing molecules are reacted at a temperature of from about 90°C to about 250°C.
- 19. A method fabricating combinatorial libraries comprising amide-containing and/or amine-containing molecules, the method comprising reacting in a solvent a plurality of reactants, the reactants comprising a plurality of at least two distinct amides, or a plurality of at least one amide and at least one amine, in the presence of a metal-containing catalyst, at a temperature of about 250°C or less, wherein a reaction takes place and the reaction is selected from the group consisting of transamidation and amide metathesis reactions.
